TOXICOLOGY

SUBJECT INDEX

Volume 58 (1989)

administration route, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, feed intake, body weight regulation, 167
ALT, argemone oil, histopathology, haematology, AST, GSH, lipid peroxidation, 285
alterations in rats, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, retinoid homeostasis, 267
anion transport, ochratoxin A, nephrotoxins, renal slice transport, 97
argemone oil, histopathology, haematology, ALT, AST, GSH, lipid peroxidation, 285
AST, argemone oil, histopathology, haematology, ALT, GSH, lipid peroxidation, 285
Na^+/K^+-ATPase, ecotoxin, partition coefficient, CHO-cells, quantitative structure-activity relationship, 197

benzo[*a*]pyrene, solvent, xylene, cytochrome *P*-450, phospholipid, membrane fluidity, 155
biochemical brain response, vesicants, monofunctional sulfur mustard, butyl 2-chloroethyl sulfide (BCS), oxidative stress, lipid peroxidation, 11
blood biochemical changes, *N,N*-diethylphenylacetamide, cutaneous LD_{50}, urinary metabolites, ethylphenylacetamide, phenylacetamide, phenylacetic acid, 81
body weight regulation, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, administration route, feed intake, 167
brain, ethylene oxide, liver, lipid peroxidation, glutathione, glutathione reductase, 1
butyl 2-chloroethyl sulfide (BCS), vesicants, monofunctional sulfur mustard, oxidative stress, lipid peroxidation, biochemical brain response, 11

cadmium, oral, intravenous, intestinal absorption, kidney deposition, metallothionein, subcellular fractions, 325
cadmium, *Tetrahymena,* cell proliferation, mortality, culture conditions, 211
cadmium intoxication, cadmium mobilization, dithiocarbamate analogs, chelating agents, rate of cadmium mobilization, 313
cadmium mobilization, dithiocarbamate analogs, cadmium intoxication, chelating agents, rate of cadmium mobilization, 313
cadmium toxicity, cadmium uptake, glutathione, thiols, membrane damage, lipid peroxidation, 175
cadmium uptake, cadmium toxicity, glutathione, thiols, membrane damage, lipid peroxidation, 175
carbaryl, *N*-nitrosocarbaryl, lipoperoxidation, microsomes, 299
cell cycle analysis, trialkyltins, cell viability, flow cytometry, membrane potential, 90° light scatter, FITC fluorescence, 107
cell proliferation, cadmium, *Tetrahymena,* mortality, culture conditions, 211
cell viability, trialkyltins, flow cytometry, membrane potential, 90° light scatter, cell cycle analysis, FITC fluorescence, 107
chelating agents, cadmium mobilization, dithiocarbamate analogs, cadmium intoxication, rate of cadmium mobilization, 313
CHO-cells, ecotoxin, partition coefficient, Na^+/K^+-ATPase, quantitative structure-activity relationship, 197
cisplatin, nephrotoxicity, mitochondria, 71
clofibrate, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, DNA single strand breaks, desferrioxamine, thiobarbituric acid reactive substances, lipid peroxidation, oltipraz, 57
culture conditions, cadmium, *Tetrahymena,* cell proliferation, mortality, 211
culture slices (renal), renal slices, 1,2-dichlorovinyl cysteine (D, L forms), renal (in vivo), 33
cutaneous LD_{50}, *N,N*-diethylphenylacetamide, blood biochemical changes, urinary metabolites, ethylphenylacetamide, phenylacetamide, phenylacetic acid, 81

cytochrome *P*-450, solvent, xylene, benzo-[*a*]pyrene, phospholipid, membrane fluidity, 155

desferrioxamine, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, DNA single strand breaks, thiobarbituric acid reactive substances, lipid peroxidation, oltipraz, clofibrate, 57
1,2-dibromo-3-chloropropane, testicular toxicity, DNA damage, species differences, 133
dichloroacetic acid, trichloroacetic acid, peroxisome proliferation, DNA single strand breaks, 239
1,2-dichlorovinyl cysteine (D, L forms), renal slices, culture slices (renal), renal (in vivo), 33
dichlorvos, diphenhydramine, organophosphorus insecticide, fenamiphos, toxicity, 91
diethylmaleate, mercuric nephrotoxicity, glutathione depletion, rat renal clearance, 187
N,N-diethylphenylacetamide, cutaneous LD_{50}, blood biochemical changes, urinary metabolites, ethylphenylacetamide, phenylacetamide, phenylacetic acid, 81
diphenhydramine, organophosphorus insecticide, fenamiphos, dichlorvos, toxicity, 91
dithiocarbamate analogs, cadmium mobilization, cadmium intoxication, chelating agents, rate of cadmium mobilization, 313
DNA damage, 1,2-dibromo-3-chloropropane, testicular toxicity, species differences, 133
DNA single strand breaks, dichloroacetic acid, trichloroacetic acid, peroxisome proliferation, 239
DNA single strand breaks, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, desferrioxamine, thiobarbituric acid reactive substances, lipid peroxidation, oltipraz, clofibrate, 57
dose-response relationship, urinary cadmium, β_2-microglobulin, 121
drug-induced mucopolysaccharidosis, tilorone, tilorone analogues, sulfated glycosaminoglycans, 145

ecotoxin, partition coefficient, CHO-cells, Na^+/K^+-ATPase, quantitative structure-activity relationship, 197
ethylene oxide, liver, brain, lipid peroxidation, glutathione, glutathione reductase, 1
ethylphenylacetamide, *N,N*-diethylphenylacetamide, cutaneous LD_{50}, blood biochemical changes, urinary metabolites, phenylacetamide, phenylacetic acid, 81

feed intake, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, administration route, body weight regulation, 167
fenamiphos, diphenhydramine, organophosphorus insecticide, dichlorvos, toxicity, 91
FITC fluorescence, trialkyltins, cell viability, flow cytometry, membrane potential, 90° light scatter, cell cycle analysis, 107
flow cytometry, trialkyltins, cell viability, membrane potential, 90° light scatter, cell cycle analysis, FITC fluorescence, 107

glucokinase, hepatotoxicity, hexokinase, liver, thioacetamide, 21
glucose oxidase, interstitial pulmonary fibrosis, lactoperoxidase, oxidants, 249
glutathione, cadmium toxicity, cadmium uptake, thiols, membrane damage, lipid peroxidation, 175
glutathione, ethylene oxide, liver, brain, lipid peroxidation, glutathione reductase, 1
glutathione depletion, mercuric nephrotoxicity, rat renal clearance, diethylmaleate, 187
glutathione reductase, ethylene oxide, liver, brain, lipid peroxidation, glutathione, 1
GSH, argemone oil, histopathology, haematology, ALT, AST, lipid peroxidation, 285
haematology, argemone oil, histopathology, ALT, AST, GSH, lipid peroxidation, 285
hepatotoxicity, glucokinase, hexokinase, liver, thioacetamide, 21
hexokinase, glucokinase, hepatotoxicity, liver, thioacetamide, 21
histopathology, argemone oil, haematology, ALT, AST, GSH, lipid peroxidation, 285

interstitial pulmonary fibrosis, glucose oxidase, lactoperoxidase, oxidants, 249
intestinal absorption, cadmium, oral, intravenous, kidney deposition, metallothionein, subcellular fractions, 325
intravenous, cadmium, oral, intestinal absorption, kidney deposition, metallothionein, subcellular fractions, 325

kidney deposition, cadmium, oral, intravenous, intestinal absorption, metallothionein, subcellular fractions, 325

lactoperoxidase, interstitial pulmonary fibrosis, glucose oxidase, oxidants, 249
90° light scatter, trialkyltins, cell viability, flow cytometry, membrane potential, cell cycle analysis, FITC fluorescence, 107

lipid peroxidation, argemone oil, histopathology, haematology, ALT, AST, GSH, 285
lipid peroxidation, cadmium toxicity, cadmium uptake, glutathione, thiols, membrane damage, 175
lipid peroxidation, ethylene oxide, liver, brain, glutathione, glutathione reductase, 1
lipid peroxidation, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, DNA single strand breaks, desferrioxamine, thiobarbituric acid reactive substances, oltipraz, clofibrate, 57
lipid peroxidation, vesicants, monofunctional sulfur mustard, butyl 2-chloroethyl sulfide (BCS), oxidative stress, biochemical brain response, 11
lipoperoxidation, *N*-nitrosocarbaryl, carbaryl, microsomes, 299
liver, ethylene oxide, brain, lipid peroxidation, glutathione, glutathione reductase, 1
liver, glucokinase, hepatotoxicity, hexokinase, thioacetamide, 21

membrane damage, cadmium toxicity, cadmium uptake, glutathione, thiols, lipid peroxidation, 175
membrane fluidity, solvent, xylene, benzo[*a*]pyrene, cytochrome *P*-450, phospholipid, 155
membrane potential, trialkyltins, cell viability, flow cytometry, 90° light scatter, cell cycle analysis, FITC fluorescence, 107
mercuric nephrotoxicity, glutathione depletion, rat renal clearance, diethylmaleate, 187
metallothionein, cadmium, oral, intravenous, intestinal absorption, kidney deposition, subcellular fractions, 325
β_2-microglobulin, dose-response relationship, urinary cadmium, 121
microsomes, *N*-nitrosocarbaryl, carbaryl, lipoperoxidation, 299
mitochondria, cisplatin, nephrotoxicity, 71
monofunctional sulfur mustard, vesicants, butyl 2-chloroethyl sulfide (BCS), oxidative stress, lipid peroxidation, biochemical brain response, 11
mortality, cadmium, *Tetrahymena,* cell proliferation, culture conditions, 211

nephrotoxicity, cisplatin, mitochondria, 71
nephrotoxicity, thiobenzamide, thioamides, S-oxidation, 43
nephrotoxins, ochratoxin A, anion transport, renal slice transport, 97
N-nitrosocarbaryl, carbaryl, lipoperoxidation, microsomes, 299

ochratoxin A, nephrotoxins, anion transport, renal slice transport, 97
oltipraz, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, DNA single strand breaks, desferrioxamine, thiobarbituric acid reactive substances, lipid peroxidation, clofibrate, 57
oral, cadmium, intravenous, intestinal absorption, kidney deposition, metallothionein, subcellular fractions, 325
organophosphorus insecticide, diphenhydramine, fenamiphos, dichlorvos, toxicity, 91
oxidants, interstitial pulmonary fibrosis, glucose oxidase, lactoperoxidase, 249
oxidative stress, vesicants, monofunctional sulfur mustard, butyl 2-chloroethyl sulfide (BCS), lipid peroxidation, biochemical brain response, 11

partition coefficient, ecotoxin, CHO-cells, Na^+/K^+-ATPase, quantitative structure-activity relationship, 197
peroxisome proliferation, dichloroacetic acid, trichloroacetic acid, DNA single strand breaks, 239
phenylacetamide, *N,N*-diethylphenylacetamide, cutaneous LD_{50}, blood biochemical changes, urinary metabolites, ethylphenylacetamide, phenylacetic acid, 81
phenylacetic acid, *N,N*-diethylphenylacetamide, cutaneous LD_{50}, blood biochemical changes, urinary metabolites, ethylphenylacetamide, phenylacetamide, 81
phospholipid, solvent, xylene, benzo[*a*]pyrene, cytochrome *P*-450, membrane fluidity, 155

quantitative structure-activity relationship, ecotoxin, partition coefficient, CHO-cells, Na^+/K^+-ATPase, 197

rate of cadmium mobilization, cadmium mobilization, dithiocarbamate analogs, cadmium intoxication, chelating agents, 313
rat renal clearance, mercuric nephrotoxicity, glutathione depletion, diethylmaleate, 187
renal (in vivo), renal slices, culture slices (renal), 1,2-dichlorovinyl cysteine (D, L forms), 33
renal slices, culture slices (renal), 1,2-dichlorovinyl cysteine (D, L forms), renal (in vivo), 33
renal slice transport, ochratoxin A, nephrotoxins, anion transport, 97

retinoid homeostasis, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, alterations in rats, 267

S-oxidation, thiobenzamide, thioamides, nephrotoxicity, 43
solvent, xylene, benzo[*a*]pyrene, cytochrome *P*-450, phospholipid, membrane fluidity, 155
species differences, 1,2-dibromo-3-chloropropane, testicular toxicity, DNA damage, 133
subcellular fractions, cadmium, oral, intravenous, intestinal absorption, kidney deposition, metallothionein, 325
sulfated glycosaminoglycans, tilorone, tilorone analogues, drug-induced mucopolysaccharidosis, 145

testicular toxicity, 1,2-dibromo-3-chloropropane, DNA damage, species differences, 133
2,3,7,8-tetrachlorodibenzo-*p*-dioxin, administration route, feed intake, body weight regulation, 167
2,3,7,8-tetrachlorodibenzo-*p*-dioxin, DNA single strand breaks, desferrioxamine, thiobarbituric acid reactive substances, lipid peroxidation, oltipraz, clofibrate, 57
2,3,7,8-tetrachlorodibenzo-*p*-dioxin, retinoid homeostasis, alterations in rats, 267
Tetrahymena, cadmium, cell proliferation, mortality, culture conditions, 211
thioacetamide, glucokinase, hepatotoxicity, hexokinase, liver, 21
thioamides, thiobenzamide, nephrotoxicity, S-oxidation, 43
thiobarbituric acid reactive substances, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, DNA single strand breaks, desferrioxamine, lipid peroxidation, oltipraz, clofibrate, 57
thiobenzamide, thioamides, nephrotoxicity, S-oxidation, 43
thiols, cadmium toxicity, cadmium uptake, glutathione, membrane damage, lipid peroxidation, 175
tilorone, tilorone analogues, drug-induced mucopolysaccharidosis, sulfated glycosaminoglycans, 145
tilorone analogues, tilorone, drug-induced mucopolysaccharidosis, sulfated glycosaminoglycans, 145
toxicity, diphenhydramine, organophosphorus insecticide, fenamiphos, dichlorvos, 91
trialkyltins, cell viability, flow cytometry, membrane potential, 90° light scatter, cell cycle analysis, FITC fluorescence, 107
trichloroacetic acid, dichloroacetic acid, peroxisome proliferation, DNA single strand breaks, 239

urinary cadmium, dose-response relationship, β_2-microglobulin, 121
urinary metabolites, *N,N*-diethylphenylacetamide, cutaneous LD_{50}, blood biochemical changes, ethylphenylacetamide, phenylacetamide, phenylacetic acid, 81

vesicants, monofunctional sulfur mustard, butyl 2-chloroethyl sulfide (BCS), oxidative stress, lipid peroxidation, biochemical brain response, 11

xylene, solvent, benzo[*a*]pyrene, cytochrome *P*-450, phospholipid, membrane fluidity, 155
